## Transportation Trip Calculator

This supplemental form provides the City of Issaquah with Trip Generation information. This information is used for the following purposes:

- 1) Transportation Impact Analysis: Establish the land uses and number of traffic trips generated by a development; and,
- 2) Transportation Concurrency: a) Consistency of proposed land use type, location, and size with the City's land use forecasts used for concurrency modeling; and, b) Proposed trips within the citywide Trip Bank capacity.

### A. General Information

Project Name: \_\_\_\_\_

Contact: \_\_\_\_\_ Phone: \_\_\_\_\_

### B. Trip Calculator

Please complete the Trip Calculator to provide the applicant's estimate of how a development meets the citywide Trip Bank.

Prior Uses	Number	Unit of Measure	Trips per unit	Total
Proposed Uses				

Trips (Proposed):

- Trips (Prior): \_\_\_\_\_

Net Trips:

### C. For Traffic Impact Analysis Purposes

A Traffic Impact Analysis (TIA) is required if your project generates: 1) greater than or equal to 30 new net trips, or 2) if required by the City if less than 30 trips. Please see our [TIA Guidelines](#) for more information.

☐ A Transportation Impact Analysis is required.

### D. For Concurrency Application Purposes

A concurrency application fee is due at the time of your Transportation Concurrency Certificate Application. Fee amount is calculated as:

(Net Trips) \_\_\_\_\_ X \$52.50 = \_\_\_\_\_ (fee includes technology surcharge)
